

Amendments to the Specification:

At page 3, line 27 amend the last two lines of the third paragraph as follows:

The LUN is typically a unique identifier that designates a logical volume which can include logical storage to which logical objects and files may be allocated and correspondingly accessed as would be visible to an operating system and /or storage application enables the differentiation between various devices, each of which forms a logical unit, on a bus. Each LUN identifies a specific logical unit, which may be an end user, a file or an application program.
